

Exam Paper 3

Student name: dania

Question 1: What is the Ring of Fire, and why is it significant in geography?

Answer 1: The Ring of Fire is a circular zone around the Pacific Ocean famous for lots of earthquakes and volcanic stuff. It matters because it has many tectonic plate borders, causing things like earthquakes and volcano explosions.

Question 2: What is the significance of the Equator, and which continents does it pass through?

Answer 2: The Equator is an imaginary line going around the Earth between the North and South Poles. It's important because it's the reference point for measuring longitude. It passes through continents like Africa, South America, and Asia.

Question 3: What is the significance of the Amazon Rainforest, and why is it often referred to as the "lungs of the Earth"?

Answer 3: The Amazon Rainforest is really important for biodiversity worldwide, with lots of different plants and animals. People call it the "lungs of the Earth" because it makes a big part of the world's oxygen and helps with the Earth's weather.
